PARKING LOT REPLACEMENT PROJECT CONSTRUCTION UPDATE

The Hidden Valley Village Website -- <http://HVVcondos.com>

Hello, HVV Owners,

The lower complex parking lot replacement project construction has begun, albeit later than expected. The reason for the delayed start as explained by the contractor is that the water/oil separator required by the ML Township took longer to manufacture than originally promised. This item is a large [approximately 15'x15'x20'] tank which had to be custom ordered and fabricated. It is to be buried beneath the surface of the parking lot and which as the name indicates is to separate oil from the parking lot runoff water before that water continues to flow downhill. Runoff water from the parking lot will be directed to grated surface inlets at various locations, and then transported by underground pipes into the separator.

In spite of the delay, the contractor assures that the work will be finished before Labor Day.
